

ABSTRACT OF THE DISCLOSURE

Convenience of a digital camera is improved and the performance specialized for each function is also improved. A photography system 1 includes a photography device 10 by which
5 the photographic objects are photographed to acquire the image information, and a portable data processing device 20 which is formed separately from the photography device 10 and stores the image information. The photography device 10 has an image information transmission means 12 that transmits the image
10 information acquired to the data processing device 20 directly.
